- Initial Project Proforma Assesments & Help in Establishing Target Energy Production
- Due Diligence & Technical Feasibility Studies
- Design Survey & Subdivision Mapping
- Processing & Technical Engineering Studies as Part Entitlement Actions
- Detailed Site Design & Civil Construction Documents

HFI is involved with several national players in the Renewable Energy Business including Element Power, Horizon Wind, and several regional players including California Solar Energy Developers LLC, Southern California Edison and Los Angeles Department of Water & Power. The firm's project experience covers both solar power and wind turbine technology facility-types across several large projects in Southern California. HFI understands and can help navigate the challenges involved with securing both interim and ultimate entitlement approvals. HFI's experience collaborating with the entire project team ensures the project's targeted objectives are achieved.

HFI's renewable energy projects include new development and construction of over 12,000 acres of high desert into energy producing plants that connect to the regional CA-ISO grid system.
